

what does an **engine reconditioner** do?

Engine reconditioning provides a valuable service to industry and the community. Instead of scrapping used engines, society relies on engine reconditioners to sustainably ensure the continued operation of all types of engines from single cylinder units used in lawnmowers to motor vehicles and the large diesel engines used in marine operations.

You will learn to:

- install engines in cars, boats, trucks or tractors
- dismantle, check and inspect engines for wear
- repair and recondition cylinder heads and cylinder blocks
- diagnose reasons for engine failure.
