

what does a forklift technician do?

Forklift technicians diagnose, service, repair and overhaul forklift and allied vehicles for a large range of industry sectors – transport, warehousing and mining to name a few. Unique challenges are on offer for skilled people in automotive electrics, hydraulics and alternative fuels for forklifts.

You will learn to:

- diagnose and repair hydraulics
- operate across different fuel types
- test and repair complex electric systems
- work across a vast range of self propelled lifting equipment.
