

what do **auto electricians** do?

Modern vehicles are equipped with the latest technology, linked by computers that need to be maintained, diagnosed, repaired, replaced and rebooted by auto electricians.

You will learn:

- to diagnose faults in electronic components and perform repairs
- to operate specialised testing equipment and computer analysers
- to test, disassemble, repair or replace electrical components, sensors, relays, wiring looms and processors
- the technical principles of modern engines, fuel systems, transmissions and electronics.
